PROJECTS

Fake News Detection System | Multimodal ML

- Developed a multimodal fake news detection system accepting text, image (OCR), audio (Whisper), and YouTube video inputs.
- Used SentenceTransformer with Random Forest for classification; integrated real-time news from RSS feeds.
- Built an interactive interface with Flask backend and ReactJS frontend; presented at AI GATI Hackathon.
- Impact: Can be integrated with any application for real-time detection of misinformation and misleading messages, preventing their spread in society.

SmartCareer | Resume Recommender System

- Designed an intelligent platform that accepts PDF resumes, classifies them into IT/Non-IT using keyword-based logic,
- and extracts key details like present skills and experience.
- Used Logistic Regression to predict missing skills, suitable job roles, and recommended relevant courses and certifications through an integrated learning suggestion system.
- Integrated Adzuna API for real-time job listings and enabled recruiters to shortlist candidates efficiently by matching keywords in resumes with job requirements.
- Impact: Enables students to enhance their resumes with actionable feedback and real-time opportunities, while supporting recruiters with faster, targeted candidate filtering.

Electronic Medical Record System | Live MERN Project

- Built a full-stack MERN application to digitize physiotherapy records using structured Google Form-style data inputs.
- Integrated image and video upload features via React components for capturing patient media during consultations.
- Led frontend development using ReactJS, ensuring responsive UI, real-time validation, and seamless form submissions.
- Impact: Enhanced accessibility, eliminated data loss, and enabled smooth communication between students and patients with centralized records.

RESEARCH

International Conference on STEM for Sustainable Development

Pune, India

- Research Author
- Apr 2025
- Paper Title: ChatGPT's Impact on Student Learning: Enhancing Education or Encouraging Dependency?
- Collected responses from 300+ students via Google Forms on ChatGPT usage patterns.
- Used ML models and statistical analysis to study learning impact and behavioral trends.
- Presented findings at international conference; under review in a Web of Science Indexed Journal.
- Skills Summary

Languages: Python

Libraries & Frameworks: Pandas

Tools & Technologies: Git

Operating Systems & Platforms: Windows

SQL, C (Basic)

NumPy, scikit-learn, Matplotlib, Seaborn, TensorFlow, Flask

PostgreSQL, MySQL, Power BI, Tableau, VS Code, Jupyter, LaTeX

Linux, Raspberry Pi

TECHNICAL SKILLS

CERTIFICATIONS

- **Machine Learning – Stanford University:** Supervised/unsupervised learning, neural networks.
- **Data Analytics – Google:** Data-driven decision-making, statistical analysis.
- **Website Design – Internship Studio:** HTML, CSS, responsive web development.
- **AI GATI Hackathon – Top 12 Finalist:** AI-based challenge participation.

ACHIEVEMENTS AND ROLES

- Secured First Place in Avishkar 2024 (Engineering & Technology category) and qualified for the state-level round.
- Received the All-Rounder Award at Oasis International School for academic and co-curricular excellence.
- Served as Event & Sports Coordinator at Fergusson College, managing academic, sports, and cultural events.
- Organized expert sessions and workshops as Head of Data Science Club at Fergusson College.
- Represented Pune city as a State-level Handball Player in official inter-district tournaments.
